

Molded-Oil Bearings

Molded-Oil Bearings are lubricated with NSK's original oil-impregnated material, Molded-Oil, and are suitable for corrosive and dust-contaminated environments.

Product Features

- Molded-Oil.
- Stainless steel for corrosive environments.

Benefits

- Grease-free property with no oil refilling keeps operating environments clean.
- Operating life more than twice as long as grease lubrication, in water or dust-contaminated environments.
- Contact-seal type available in standard inventory for ball bearings.
- Achieves extended maintenance-free performance as Molded-Oil provides a continuous supply of lubricant. Available for high speed applications.
- Available in ball bearing, spherical roller bearing and tapered roller bearings types.

Condition Description

- Contamination
- Corrosive Environment
- Lubrication

Industries

- Agriculture
- Chemical and Pharmaceutical
- Food and Beverage
- Material Handling
- Oil and Gas
